13. Other: ____.

Continuation Sheet (PTO-303)

Continuation of 3. NOTE: The modified limitation "a finite predetermined retention time" does not reduce or simply the issues for appeal. A predetermined retention time is inherently finite.

Continuation of 11, does NOT place the application in condition for allowance because: the applicant argues that Nagashima does not disclose, teach or suggest the following elements of claim 6: "an injection current threshold of operation below which optical loss exceeds optical gain and above which optical gain exceeds optical loss" and "the injection current having an amplitude at said threshold operation such that said optical gain and said optical loss are equal". However this argument has previously been presented by the applicant and the examiner's previous response is already part of the record. Further, the applicant's specification does not disclose that the applicant's laser is not allowed to reach the stable upper level (of Nagashima). Loss outweighs gain in the region between D and i.sub.c in fig. 3b of Nagashima, and thus no point in this region can possibly correspond to the applicant's claimed "threshold of operation such that said optical gain and said optical loss within said semiconductor laser element are equal". The specification does not support the applicant's argument that the applicant's injection current is close to i.sub.c but is not i.sub.b of Nagashima, and such argument relies on Nagashima's disclosure for limiting the applicant's invention beyond the applicant's specification. Further, the behavior of the laser of Nagashima in the injection current region i sub o through i sub t reads directly on the behavior described by the applicant for the applicant's laser, including the applicant's described behaviors "at the threshold value", "above the threshold value", "below the threshold value", "over a narrow electrical current range close to the threshold current value" and in the "threshold region".
